

6. Project Documentation

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Consolidated project report, implementation record and conclusion

6.1 Abstract

This project streamlines standard laptop procurement in ServiceNow by using Flow Designer to generate a catalog task for laptop configuration and assign it to the Hardware group. The flow is linked to the Standard Laptop catalog item, and the result is verified by placing a request and inspecting the resulting task.

6.2 Problem Statement

The manual procurement process may cause delays and overlooked configuration tasks. This creates additional work for IT staff and can increase user waiting time.

6.3 Objectives

- Ensure timely configuration for standard laptop requests.
- Reduce manual intervention and potential errors.
- Improve task allocation to the Hardware group.
- Improve efficiency and user experience in IT procurement.

6.4 System Workflow

The flow is named **Standard Laptop Task**, uses the Service Catalog trigger, and performs the Create Catalog Task action. It maps the Requested Item Record to Request item, uses Catalog Task as the table, sets both short description and description to "Laptop need to Configured", assigns the task to Hardware, and sets Approval to Approved.

6.5 Implementation Summary

- Created the flow in Flow Designer with Global application scope and System user execution.
- Configured the Service Catalog trigger and Create Catalog Task action.
- Saved and activated the flow.
- Assigned the flow to the Standard Laptop catalog item through Maintain Items and Process engine.
- Placed a Standard Laptop order, reviewed the request and approval, and checked the Catalog Tasks section.

6.6 Verification Record

Check item	Expected evidence
Flow setup	Standard Laptop Task flow exists and is activated.
Catalog linkage	Standard Laptop item uses the created flow.
Task creation	A Catalog Task is visible under the Requested Item.
Task description	"Laptop need to Configured" appears in the short description and description.
Assignment	Assignment group is Hardware.
Approval / status	Approval and task status can be reviewed in the relevant records.

6.7 Benefits

- Less manual work in creating configuration tasks.
- More consistent task details and assignment.
- Improved visibility of the task through the Requested Item record.
- Reduced risk of delays caused by overlooked configuration work.

6.8 Conclusion

By automating the standard laptop procurement process with ServiceNow Flow Designer, the project addresses manual overhead and helps ensure that configuration tasks are created and assigned to Hardware. The workflow supports timely laptop configuration, reduces user waiting time, improves resource allocation, and provides a clearer procurement experience.

6.9 Source Note

This report is organised from the supplied reference document, "Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer." The six phase documents divide and structure the source material for project submission; phase-specific items not detailed in the source are not presented as completed work.
